

Decks - a sample paper

This page exists so the example deck can embed a real PDF.

Boards render PDFs with pdf.js, at the width of the component, so a paper can sit on the canvas beside the plan that cites it.

2. Why a canvas

A transcript is a poor place to keep a plan: it scrolls away.

A board does not scroll away. It has a position, a size, and a file on disk that both the agent and the reader can edit.

3. Page ranges

This is page three. The sources board embeds pages 1-2 only, which is how a citation shows the part it means.
